

Student: \_\_\_\_\_ Teacher: \_\_\_\_\_

Date: \_\_\_\_\_ Grade: \_\_\_\_\_

## Teaching Multiplication Facts

This intervention is designed to **build fluency with multiplication facts while simultaneously decreasing errors**. Requires approximately 5 minutes each day.

### Materials Needed:

Construct a set of flashcards for a set of multiplication facts (e.g., multiplication by 3's).  
Construct a worksheet with the same facts randomly arranged (e.g., Basic Skill Builders). You will also need a digital timer and graph paper.

### Teacher (or peer tutor) Coach Card: (complete these steps every day)

\_\_\_\_\_ **Present each flashcard** to the student while verbally prompting the student with the question (e.g., “what is 3 x 3?”).

\_\_\_\_\_ **Praise** correct responses that occur within 3 seconds of the prompt (e.g., “That’s right, 3 x 3 is 9”).

\_\_\_\_\_ If no response occurs within 3 seconds or the student gives an incorrect response, **give the student the answer** (e.g., “3 x 3 is 9”).

\_\_\_\_\_ Immediately **re-deliver the verbal prompt** (e.g., “What is 3 x 3?”).

\_\_\_\_\_ **Present each card twice.**

\_\_\_\_\_ Present the student with a worksheet containing the math facts you have just presented with flashcards to **obtain a timed sample of independent work.**

\_\_\_\_\_ **Set a timer for two minutes.** Instruct the student to begin working when you say “start”, to complete as many problems as possible before the timer rings, to work horizontally across the paper without skipping any problems, and to put the pencil down when the timer rings.

\_\_\_\_\_ At the end of the two-minute time interval, give the student the answer key and **direct the student to circle each error and write the correct response underneath.**

\_\_\_\_\_ **Direct the student to calculate the number correct per minute and the number of errors.** The student may graph his or her progress across days.

**Student Coach Card:** (complete these steps every day)

\_\_\_\_\_ **Practice flashcards** with your teacher or tutor.

\_\_\_\_\_ **Take the timed test.**

\_\_\_\_\_ Place the answer key next to the worksheet and begin to **compare your answers to the answers on the key.**

\_\_\_\_\_ When you come to an error, **circle the error on your worksheet.**

\_\_\_\_\_ Re-read the question and **write the correct answer** (from the answer key) next to the incorrect answer that you have just circled.

\_\_\_\_\_ **Count the number of answers you got right.** Write this number at the top of the worksheet.

\_\_\_\_\_ **Count the number of answers you circled because they were errors.** Now write this number at the top of the worksheet.

\_\_\_\_\_ Take out **your progress graph.** Find the correct day along the bottom axis of the graph (i.e., x-axis). Now find the number correct on the side axis (i.e., y-axis). Make a dot on the graph that marks both spots. Do the same thing for number of errors.

**How will you know if it's working:** Number of problems correct should increase across days. Number of errors should decrease across days. In order to maximize effects, this intervention should be conducted daily.

**Promoting generalization:** Conduct sessions with mixed multiplication problems randomly selected from the mastered sets of cards/problems periodically (e.g., once per week).
